Work Experience

Tata Consultancy Services

Aug 2024 - Present

Software Engineer

Bengaluru, India

- Built a distributed event ingestion platform processing **100K+ infrastructure events/day**, enabling real-time observability across multi-region cloud environments.
- Developed **event-driven microservices** in Python and Node.js for log ingestion, transformation, routing, and asynchronous background processing using scalable backend architecture.
- Engineered **batch and real-time ETL pipelines** to process deployment and infrastructure logs, integrating Elasticsearch for fast indexing, search, and event correlation.
- Optimized **PostgreSQL** through indexing, query tuning, and partitioning, reducing query latency to sub-second levels and improving data retrieval performance.
- Built **REST APIs** and backend services powering internal dashboards, automation workflows, and centralized incident intelligence with logs, metrics, and metadata.
- Implemented **AI-driven automation workflows** for incident classification, log enrichment, root-cause analysis, and diagnostic orchestration, significantly reducing manual operational effort and MTTR.
- Containerized and deployed backend services using **Docker and Kubernetes**, designing scalable, fault-tolerant systems with monitoring, logging, and observability best practices.

Personal Project

Cloud Service Observability & Monitoring Platform

Tech: FastAPI, PostgreSQL, Docker, AWS CloudWatch

Web-based Monitoring and observability platform for cross cloud resource monitoring .

- Built a **cross-cloud observability platform** with real-time event streaming and monitoring dashboards.
- Designed an **event-driven architecture** with **Server-Sent Events (SSE)** for low-latency, real-time updates.
- Implemented **JWT-based RBAC authentication** to enable secure, multi-user access control.
- Containerized the application with **Docker** for consistent, production-ready deployments.

Heart Disease Prediction System (ML Backend)

Tech: Python, Flask, Scikit-learn, Pandas

Python-based web application which predicts the chance of getting heart diseases.

- Built REST APIs for **real-time ML inference with sub-100ms latency**.
- Developed end-to-end ML pipeline (preprocessing → training → inference).
- Evaluated models (Logistic Regression, Random Forest, SVM) using precision-recall metrics.

Technical Skill

Languages: Python, SQL

Backend & Architecture: FastAPI, Flask, Node.js, REST APIs, Microservices, Event-Driven Architecture, System Design.

Databases: PostgreSQL (indexing, partitioning), Elasticsearch (search & correlation), MySQL

Cloud & DevOps: Docker, Kubernetes, AWS CloudWatch, CI/CD

AI Automation: Agentic Workflows, Prompt Engineering, LLM Integration, OpenAI

API, Groq API, HuggingFace, Ollama

Developer Tools: VS Code, Postman, Linux, Git, GitHub, Claude Code

Education

Shree Devi Institute Of Technology

2020-2024

Bachelor of Engineering in Information Science and Engineering

Mangalore, Karnataka

Achievements

- Won 2nd Place in TCS AI Hackathon.
